

NFTPawn

Lending platform using NFT as collateral

IDEA

- Create more value for NFT's holders
- Allow to any NFT holder to take loans using their assets as a collateral

Why is important for RSK?

- **One step forward to DeFi:** NFT is without doubts one important aspect of the DeFi ecosystem. Having financial instruments on top of NFT is a must to any DeFi landscape
- **Ordinals:** Due the Bitcoiner nature of RSK ecosystem and origins, ordinals will probably play an important role into RSK in the near future. NFTPawn will allow to accept loans using ordinals as collateral.
- **RIF usage:** without too many modifications we can create value to RIF's token holders, for example requiring to pay platforms fees in RIF tokens. Also RIF DAO could be use for platform governance in the near future.

High level contract architecture

Business Model

- **Platforms fees:** Right now the business model is focus on fees. The platform owner specify which % is the platform fee.
- Each borrower has to pay platform fees for each loan it takes
- The fees are charged in the moment the loan is taken

**THANK
YOU!**
